SUMMARY

I'm a Frontend JavaScript/TypeScript Developer with 2 years of experience. I specialize in building user-friendly single-page web applications. I take pride in turning design ideas into efficient and high-quality code. Eager to take on new challenges and contribute to innovative projects.

WORK EXPERIENCE

Ezlogz Inc., Frontend Developer — May 2023 - Present

Project: EZLOGZ ELD APP

Responsibilities: Collaborated on e-commerce platform development, improved UI, and implemented new features. Contributed to daily stand-ups, conducted code reviews for quality, and assisted in bug resolution for a smooth user experience.

Technologies used: TypeScript, React, Redux, React Router Dom v6, Socket.io, Konva, Material Ui.

Freelance, Telegram Bot Developer — June 2023 - August 2023

Project: Telegram Bot for Barbershop

Responsibilities: Enable client registration and appointment booking; display service info, prices, and schedule; send appointment reminders and confirmations; facilitate quick communication and share location; implement a rating system and enable reviews; develop admin interface for appointment management and feedback.

Technologies used: TypeScript, grammY, NodeJS, Day.js, nodemon.

Binariks Inc., Frontend Developer — Feb 2022 - Apr 2023

Project: IONAUTE, TESSA

Responsibilities: Collaborated with cross-functional teams for smooth integration of new features into the e-commerce platform. Participated in daily stand-up meetings, addressing progress and challenges. Maintained direct communication with stakeholders, understanding requirements, and providing project updates. Key role in troubleshooting and promptly resolving software bugs for an efficient user experience.

Technologies used: Next, Redux, Redux Thunk, Formik, Day.js, i18n, react-select, yup

Project: Binariks Website

Responsibilities: Contributed to the successful execution of Binariks website through seamless teamwork. Demonstrated strong problem-solving skills for prompt issue resolution, ensuring project continuity. Integrated third-party libraries strategically to enhance project functionality and maintain industry standards. Led the development of innovative features, driving project evolution and improving user engagement.

Technologies used: Next, Formik, Day.js, react-select, yup, classnames, lottie-react, react-google-recaptcha, Sass;

Internship at Binariks Inc.

Responsibilities: 10 lectures delivered by various speakers over the course of one month. After each lecture, I was required to complete homework assignments. Successfully completing the internship guaranteed the opportunity to receive a job offer.

Technologies used: React, Redux.
